# Exam 3

Be sure to put your name on each page. This page can be removed from your exam so that you will have a Periodic Table handy throughout the exam, it does not need to be turned in. Show all your work for problems which require any sort of calculation, no credit will be given for answers without work shown. If you have shown a significant amount of work or multiple drawings for a problem, draw a box around what you consider your final answer.

1. Complete each row of the following tables for aqueous solutions at 25°C (4pts per box):

$[\text{H}_3\text{O}^+]$	$[\text{OH}^-]$	pH	pOH	Acidic, Basic or Neutral?
	$3.82 \times 10^{-11}$			
		11.158		

Conjugate Acid	$K_a$ @ 25°C	Conjugate Base	$K_b$ @ 25°C
$\text{H}_2\text{SeO}_3$			$4.3 \times 10^{-12}$
	$1.0 \times 10^{-7}$	$\text{HAsO}_4^{2-}$	

2. Does the combination listed result in an effective buffer solution? (4pts each)

Yes No 0.64mol  $\text{HClO}_4(\text{aq})$  + 0.68mol  $\text{KOH}(\text{aq})$

Yes No 0.90mol  $\text{Na}_2\text{HPO}_4(\text{aq})$  + 0.45mol  $\text{HNO}_3(\text{aq})$

Yes No 1.28mol  $\text{Na}_2\text{CO}_3(\text{aq})$  + 1.92mol  $\text{HCl}(\text{aq})$

Yes No 0.93mol  $\text{CH}_3\text{COOH}(\text{aq})$  + 1.06mol  $\text{CH}_3\text{COOK}(\text{aq})$

Yes No 0.06mol  $\text{HNO}_2(\text{aq})$  + 1.18mol  $\text{LiNO}_2(\text{aq})$

3. How much 0.583M  $\text{KOH}(\text{aq})$  must be added to 25.00mL of 0.332M  $\text{HBr}(\text{aq})$  to reach the equivalence point? What is the pH of this solution at the equivalence point? Explain. (10pts)

4. You have prepared a buffer solution by combining 0.482mols of chlorous acid ( $\text{HClO}_2$ ,  $K_a = 1.2 \times 10^{-2}$ ) and 0.513mols of potassium chlorite in enough water to make 500.0mL of solution. What is the pH of this buffer solution? (15pts)
5. What is the  $K_a$  of a weak acid if 500.0mL of a solution containing 0.278mol of the acid and 0.327 mol of its conjugate base has a pH of 8.243? Over what pH range would this conjugate acid/ conjugate base pair make an effective buffer? (15pts)
6. You are going to use a titration to determine the concentration of an unknown potassium sulfite solution ( $\text{K}_2\text{SO}_3$ ,  $\text{p}K_b = 6.806$ ). The acid you have chosen to use is 0.927M perchloric acid.
- a. Write out the chemical equations for the step-wise protonation/neutralization of sulfite and the overall/net chemical reaction. (6pts)
- b. Someone left your pH probe laying on the bench and it has dried out. After a short search, you have found the following three visual indicators: Thymolphthalein (TP, endpoint pH range = 9.5-10.5); Phenol red (PR, endpoint pH range = 6.8-8.3); Bromophenol Blue (BPB, endpoint pH range = 3.1-4.6). Which of these visual indicators would be useful in your titration? Explain your choice(s). (12pts)

(#6 continued)

- c. Sketch the titration curve you would expect for this titration, labeling all equivalence points and sulfite-based species present in each portion of the curve. (6pts)
- d. As you are about to start your titration, a package arrives with a new pH probe, so you decide to use the pH probe to monitor your titration. You find that 25.00mL of potassium sulfite requires 34.62mL of perchloric acid to reach the first equivalence point. What is the concentration of the potassium sulfite solution? (12pts)
- e. How much perchloric acid solution would be required to reach the second equivalence point in part “d”? Explain your answer. (6pts)
