

# Descriptions of Scale

Macroscale vs. Microscale

Chemistry & Molecular Biology  
bridge these worlds

<http://htwins.net/scale2/>

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# What is food made of?

Organic vs. Inorganic

Organic = “from life”, contains C-H bonds

Inorganic = no C-H bonds

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# What is food made of?

Water

Inorganic components

*Salts, minerals*

“Small” Organic Molecules

*Vitamins, metabolites*

Macromolecules

*Lipids, proteins, carbohydrates*

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

## Water

$H_2O!$

Very small, simple

Essential to all life on Earth

*Search for Extraterrestrial Life*

Most food is mostly water

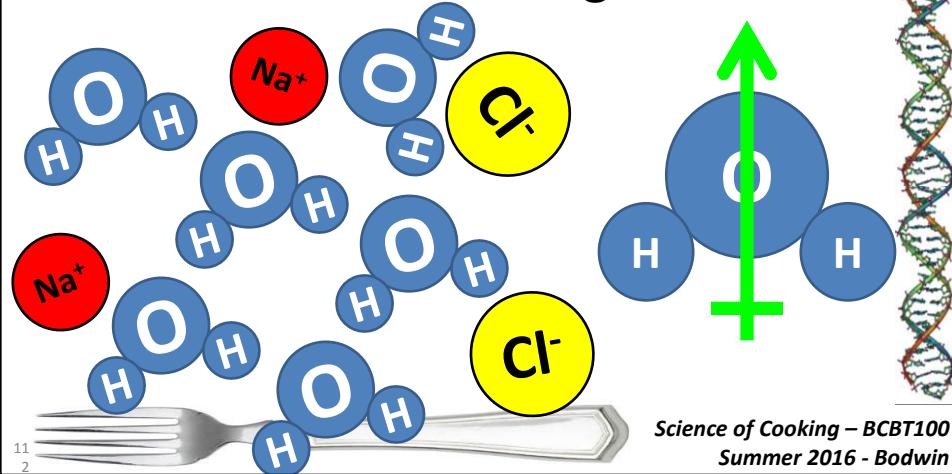

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Why is water liquid?

Water molecules are bent → polar  
Polar molecules stick together

## Water Content of Foods

Food	Water Content (%)
<b>Meat</b>	
Pork, raw, composite of lean cuts	53-60
Beef, raw, retail cuts	50-70
Chicken, raw meat without skin	74
Fish, muscle proteins	65-81
<b>Fruits</b>	
Berries, cherries, pears	80-85
Apples, peaches, oranges, grapefruit	85-90
Rhubarb, strawberries, tomatoes	90-95
<b>Vegetables</b>	
Peas (green)	74-80
Beets, broccoli, carrots, potatoes	80-90
Asparagus, beans, cabbage, cauliflower, lettuce	90-95

Source: <http://class.fst.ohio-state.edu/fst605/605%20pdf/Water.pdf>

# Water in Foods

Water content of some foods	
Food	Water content (%)
Beef	50 to 70
Chicken meat	74
Fish	65 to 81
Pears	80 to 85
Apples, peaches, oranges	85 to 90
Tomatoes, strawberries	90 to 95
Avocado, banana	74 to 80
Carrot, potato	80 to 90
Lettuce, lentils	90 to 95
Honey	20
Jam	28
Flour, rice	12
Milk powder	4

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Inorganic Components

“Salts” – charged particles

Sodium chloride →  $\text{Na}^+$  and  $\text{Cl}^-$

Other trace minerals

Iron, potassium, calcium, magnesium, etc

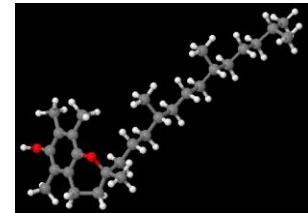

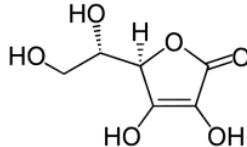

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

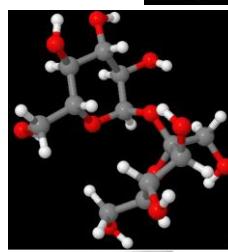

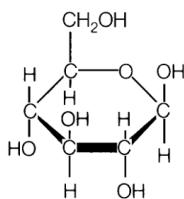

# “Small” Organic Molecules

“Organic” = containing C and H

Vitamins

Sugars

Others

11

6

*Science of Cooking – BCBT100  
Summer 2016 - Bodwin*

# BIG Food Molecules

Lipids

Proteins

Carbohydrates

DNA/RNA

11

7

*Science of Cooking – BCBT100  
Summer 2016 - Bodwin*

# Lipids

## Fats

Long chains of (mostly) C and H

Lipids are non-polar

Don't mix w/water = "hydrophobic"

"like dissolves like"

Molecule animations: <http://www.biographics.co.uk/JmolApplet/jcontentstable.html>

Fatty acids Jmol:

[http://www.mpcfaculty.net/mark\\_bishop/Bishop\\_Jmol\\_fatty\\_acids\\_triglyceride.htm](http://www.mpcfaculty.net/mark_bishop/Bishop_Jmol_fatty_acids_triglyceride.htm)

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

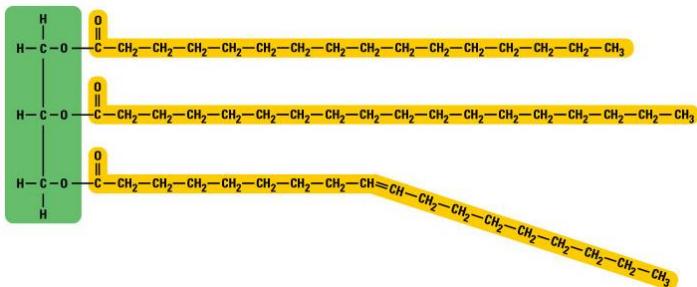

# Fatty Acids/Triglycerides

Vinegar = 2 carbons

Water soluble

Stearic acid = 18 carbons

NOT water soluble

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Types of Fats

Saturated vs. Unsaturated

Mono- vs Polyunsaturated

*"Hydrogenated"*

**"Omega-3"**

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Macromolecules

Polymers –

poly=“many”, meros=“parts”

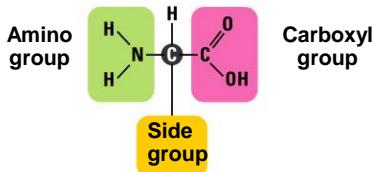

Different “parts” result in  
different function/properties

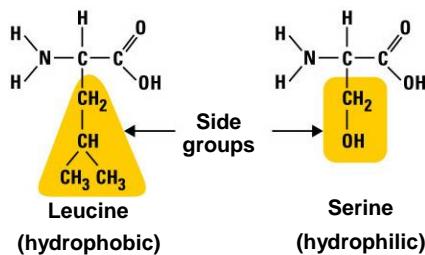

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Amino Acids

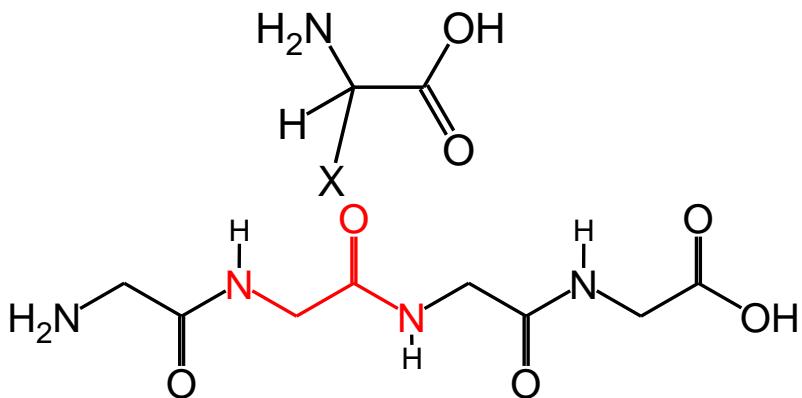

Central Carbon  
Carboxyl group  
Amino group  
Side chain - varies

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Proteins

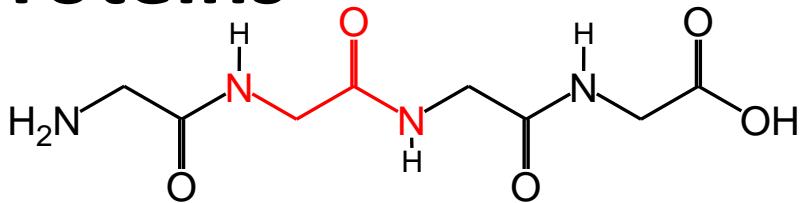

Polymers made of amino acids

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

12  
3

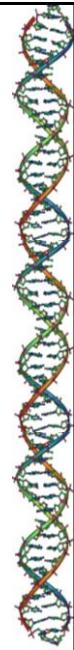

# Proteins

Shape depends upon properties of side chains interacting with water

Shape = Function

20 “letters”, many “words”

*Science of Cooking – BCBT100  
Summer 2016 - Bodwin*

## 4 Levels of Protein Structure

Primary – aa order

Secondary – near aa interactions

Tertiary – long range in 1 protein

Quaternary – clusters of proteins

***Denaturing disturbs structure***

Protein structure: [http://en.wikipedia.org/wiki/File:Main\\_protein\\_structure\\_levels\\_en.svg](http://en.wikipedia.org/wiki/File:Main_protein_structure_levels_en.svg)

*Science of Cooking – BCBT100  
Summer 2016 - Bodwin*

# Carbohydrates

“Carbo” → carbon

“hydrate” → water, O and H

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

## Common Sugars

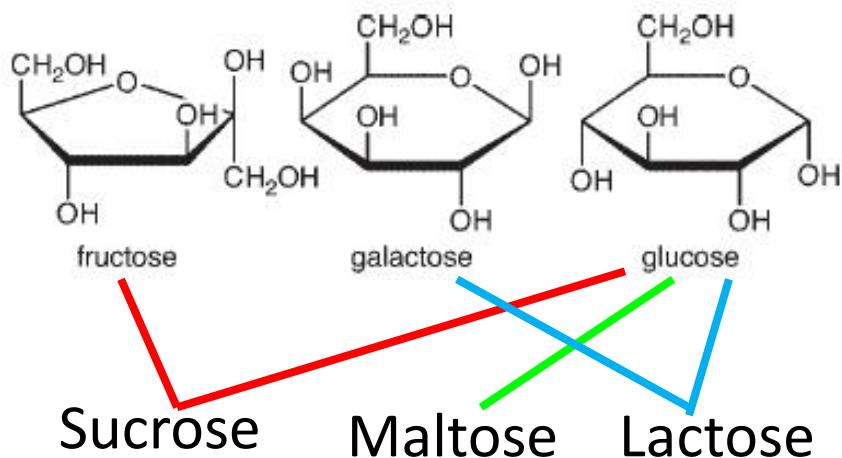

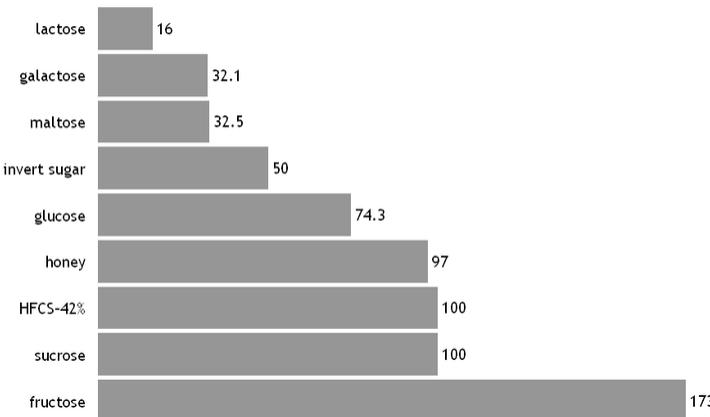

Image: <http://en.wikipedia.org/wiki/File:Glycolysis2.svg>

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Common Sugars

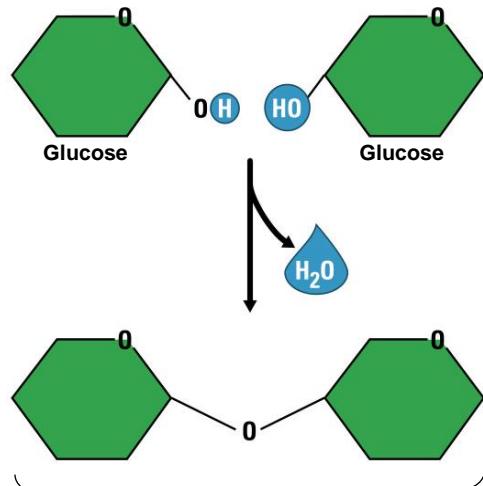

Relative sweetness of sugars and sweeteners

Image: <http://en.wikipedia.org/wiki/File:Relativesweetness.png>

**Science of Cooking – BCBT100**  
Summer 2016 - Bodwin

## Disaccharides

Monosaccharides react to form disaccharides  
Liberate water  
*Dehydration Condensation*  
Reversible  
*Hydrolysis*  
"-ase" enzymes

Image: <http://en.wikipedia.org/wiki/File:Glycolysis2.svg>

**Science of Cooking – BCBT100**  
Summer 2016 - Bodwin

# Polysaccharides

Storage and structure

Starch, Glycogen, Cellulose

***Sugar polymers***

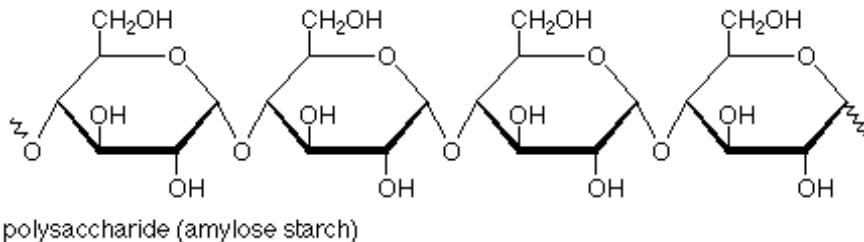

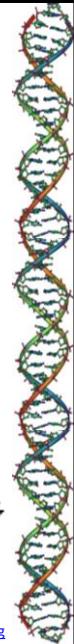

Image: <http://en.wikipedia.org/wiki/File:Amylose2.svg>

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Starch

Glucose polymers

Energy storage in plants

Potatoes, rice, grains

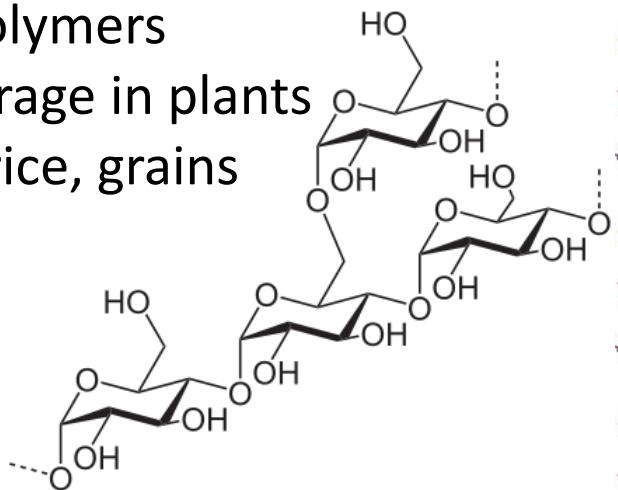

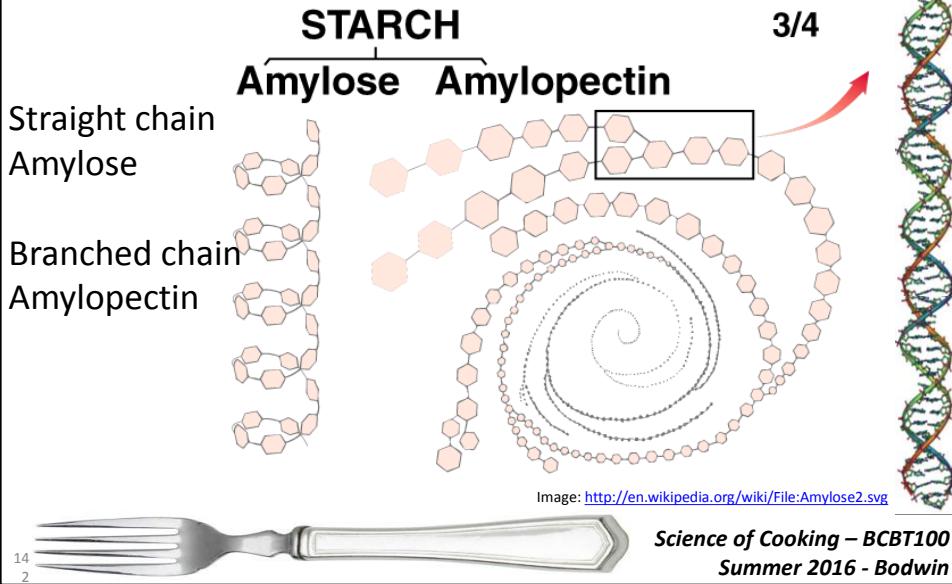

Image: [http://en.wikipedia.org/wiki/File:Amylopektin\\_Sessel.svg](http://en.wikipedia.org/wiki/File:Amylopektin_Sessel.svg)

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Starch - Structure

# Starch – In foods

Thickener – binds a LOT of water

Provides energy - amylase

*Industrially:*

Dextrose = glucose derived from hydrolyzed starch

HFCS – dextrose treated with glucose isomerase

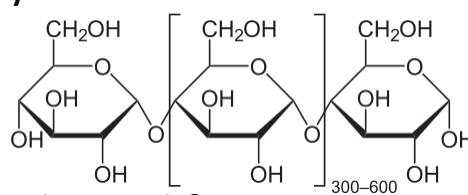

Image: <http://en.wikipedia.org/wiki/File:Amylose2.svg>

*Science of Cooking – BCBT100  
Summer 2016 - Bodwin*

# Glycogen – “animal starch”

Highly branched glucose polymer  
Energy storage  
**GLYCOGEN**

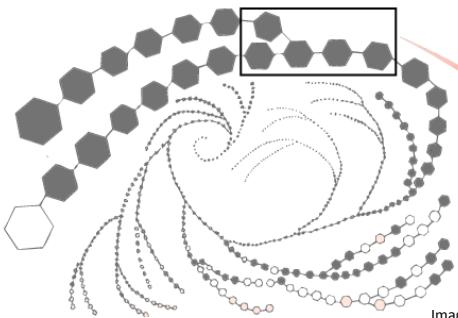

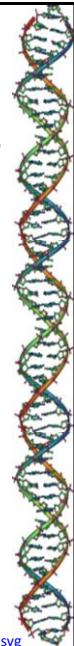

Image: <http://en.wikipedia.org/wiki/File:Amylose2.svg>

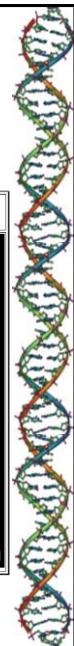

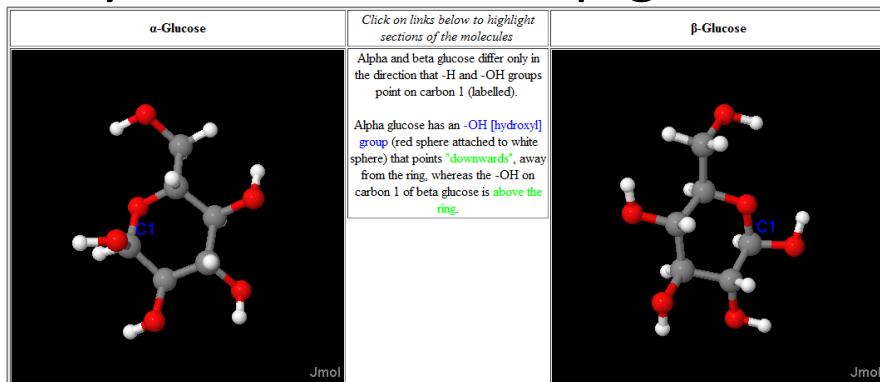

**Science of Cooking – BCBT100**  
**Summer 2016 - Bodwin**

# Cellulose

Polymers made from  $\beta$ -glucose

Side-by-side animations:

<http://www.biotoptics.co.uk/JmolApplet/alphabetaoglucose2.html>

**Science of Cooking – BCBT100**  
**Summer 2016 - Bodwin**

# Cellulose

Enzymes that break amylose  
can't break cellulose

Rigid, tough *fibers* that make  
plant cell walls and stalks

Cross-linking

*Science of Cooking – BCBT100  
Summer 2016 - Bodwin*

# Cellulose - Dietary

Insoluble Fiber

Highly modified cellulose, up to ~1/2 the  
mass of a plant

Binds water, “feel full”

Draws water into gut

Fruits, vegetables, whole grains

*Science of Cooking – BCBT100  
Summer 2016 - Bodwin*

# Cellulose - Dietary

## Soluble Fiber

Highly modified cellulose

Forms gel with high water content

Water-soluble substances absorbed by  
gel – “intestine sweeper”

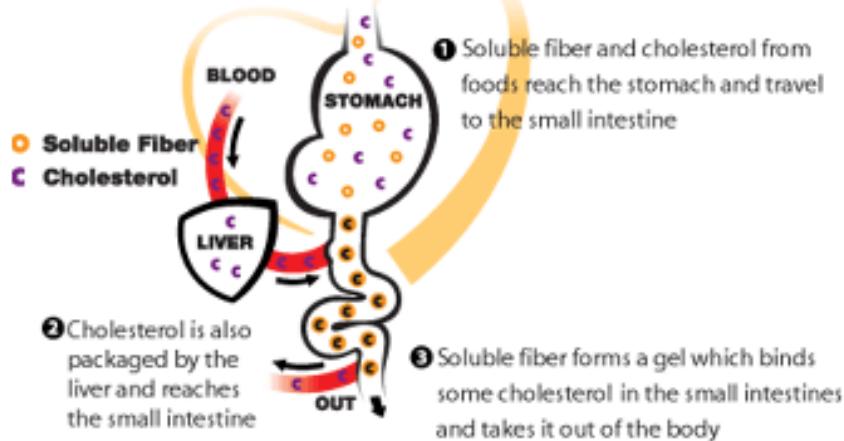

14  
8

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Cellulose - Dietary

## How Soluble Fiber May Lower Cholesterol

14  
9

Science of Cooking – BCBT100  
Summer 2016 - Bodwin

# Cellulose – Food source?

Cellulosic fiber is indigestible

Most animals lack enzymes to break down cellulose

Ruminants have bacteria in the gut that {partially} digest cellulose to glucose

Image: <http://www.publicdomainpictures.net/view-image.php?image=627&picture=black-cow>, <http://www.cvm.ncsu.edu/vhc/efac/rhm/>

*Science of Cooking – BCBT100  
Summer 2016 - Bodwin*

# Interactions

Fats and water  
Amphiphiles  
Micelles  
Emulsifiers

*Science of Cooking – BCBT100  
Summer 2016 - Bodwin*
