

From Last Time:

Saute – to cook in a hot pan using very little fat or oil

Denature – to change the structure of a protein

Melt – to change from solid to liquid

Cilantro – a herb, the leaves of coriander

Protein – long chains of amino acids

Salt – sodium chloride; can describe any substance made of charged particles

What is “cooking”?

- Preparing food & drink
- Understanding flavors
- Exploring combinations
- Experiencing textures

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Sciences of Cooking

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Using recipes

- More than a list of ingredients
- Process matters
- What’s happening on a molecular level?
- How can a recipe be changed?

Science of Cooking – BCBT100
Fall 2012 - Bodwin

What is food made of?

Water

Inorganic components

Salts, minerals

“Small” Organic Molecules

Vitamins, metabolites

Macromolecules

Lipids, proteins, carbohydrates

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Water

H₂O!

Very small, simple

Essential to all life on Earth

Search for Extraterrestrial Life

Most food is mostly water

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Why is water liquid?

Water molecules are bent → polar

Polar molecules stick together

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Water Content of Foods

Food	Water Content (%)
Meat	
Pork, raw, composite of lean cuts	53-60
Beef, raw, retail cuts	50-70
Chicken, raw meat without skin	74
Fish, muscle proteins	65-81
Fruits	
Berries, cherries, pears	80-85
Apples, peaches, oranges, grapefruit	85-90
Rhubarb, strawberries, tomatoes	90-95
Vegetables	
Peas (green)	74-80
Beets, broccoli, carrots, potatoes	80-90
Asparagus, beans, cabbage, cauliflower, lettuce	90-95

Water in Foods

Water content of some foods

Food	Water content (%)
Beef	50 to 70
Chicken meat	74
Fish	65 to 81
Pears	80 to 85
Apples, peaches, oranges	85 to 90
Tomatoes, strawberries	90 to 95
Avocado, banana	74 to 80
Carrot, potato	80 to 90
Lettuce, lentils	90 to 95
Honey	20
Jam	28
Flour, rice	12
Milk powder	4

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Inorganic Components

“Salts” – charged particles

Sodium chloride → Na⁺ and Cl⁻

Other trace minerals

Iron, potassium, calcium, magnesium, etc

Science of Cooking – BCBT100
Fall 2012 - Bodwin

“Small” Organic Molecules

“Organic” = containing C and H

Vitamins

Sugars

Others

Science of Cooking – BCBT100
Fall 2012 - Bodwin

BIG Food Molecules

Lipids

Proteins

Carbohydrates

DNA/RNA

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Lipids

Fats

Long chains of (mostly) C and H

Lipids are non-polar

Don't mix w/water = “hydrophobic”

“like dissolves like”

triglyceride animation: <http://www.3dchem.com/3dmolecule.asp?ID=320>

Fatty acids Jmol:

http://www.mpcfaculty.net/mark_bishop/Bishop_Jmol_fatty_acids_triglyceride.htm

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Fatty Acids/Triglycerides

Vinegar = 2 carbons

Water soluble

Stearic acid = 18 carbons

NOT water soluble

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Macromolecules

Polymers –

poly=“many”, meros=“parts”

Different “parts” result in
different function/properties

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Amino Acids

Central Carbon
Carboxyl group
Amino group
Side chain - varies

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Proteins

Polymers made of amino acids

Science of Cooking – BCBT100
Fall 2012 - Bodwin

Proteins

Shape depends upon properties of side chains interacting with water
Shape = Function
20 “letters”, many “words”

Science of Cooking – BCBT100
Fall 2012 - Bodwin

4 Levels of Protein Structure

- Primary – aa order
 - Secondary – near aa interactions
 - Tertiary – long range in 1 protein
 - Quaternary – clusters of proteins
- Denaturing disturbs structure**

Protein structure: http://en.wikipedia.org/wiki/File:Main_protein_structure_levels_en.svg
